

Group 20 - Learning Center

Group Name: Learnlink

Business 2: Rocket Innovation Studio

1. What technologies or frameworks are preferred for developing the Learning Center (frontend and backend)?
2. Could you please elaborate on the statement that 'Labs can also be done and understood without the use of the website'? What is the vision for users completing and understanding the labs outside of the web platform?
3. Do you have any design guidelines, style preferences, or existing branding elements that should be incorporated into the website's UI?
4. Are there any specific performance requirements or benchmarks that need to be met, particularly under heavy traffic?
5. Could you clarify how you'd like the Git integration to function for adding new labs? Should every update automatically reflect on the live site, or will there be a staging environment for approval?
6. How crucial is offline access to the learning materials, and should we prioritize a progressive web app approach?
7. What are the core features that must be included in the MVP (Minimum Viable Product) of the Learning Center?
8. How important is multilingual support for the Learning Center, and should we plan for internationalization from the start?
9. Is there a plan for handling multiple contributors or version control for the Markdown files?
